MAX SCHLING'S SELECTED GLADIOLUS

FIRST QUALITY—SELECTED AND APPROVED BY MAX SCHLING

Without exception there has been no garden flower which has been so thoroughly improved in the past decade, nor has any flower made such gains in popularity. It is not unusual to find varieties today with blooming spikes averaging well over 30 inches with individual florets measuring up to 6 inches in diameter. In addition to the increase in size, color developments have been made, combining practically every color known to man.

Our bulbs are plump, high-crowned, guaranteed No. 1 size, and are thrip treated with DDT and thrip free.

To assist in selecting colors, the varieties are listed under color classifications. 50 or more sold at the hundred rate.

NOTES ON GLADIOLUS CULTURE

Gladiolus can be planted in the latitude of New York City from April 15th to July 10th. If successive flowering is desired, recommend plantings at two-week intervals.

Gladiolus do best in a good garden soil with a sunny location. For largest flowers it is well to use a general purpose fertilizer before planting and again as a side dressing when the plants are 12 to 15 inches high. Plant bulbs at a depth of four to six inches.

For exhibition spikes it is necessary to provide water during periods of drought, soaking the ground to a depth of 4 to 5 inches once a week.

When cutting Gladiolus spikes, allow the two outside leaves to remain on the plant to provide food for next year's bulbs.

Gladiolus have only one serious pest, thrips. Bulbs, when you get them from us, have all been dusted with DDT, and are free of thrips. To prevent injury from this insect, we recommend spraying or dusting with a garden preparation containing at least 10% DDT. This should be done every week to 10 days.

SEEDS of HARDY FLOWERS—PERENNIALS AND BIENNIALS

HOW TO GROW THEM. Hardy plants (perennials) bloom the second year from seed and are permanent thereafter. Some of them may bloom the first year if the seed is sown very early. Among the perennials we find some of the most beautiful flowers for cutting and many of the old-fashioned sorts dear to our childhood memories. A hardy border properly planned and planted is a source of joy from early spring to late autumn; during that period it will be resplendent with color and yield an abundance of bloom for indoor decoration. The plants need little attention other than to be kept free from weeds and given an occasional top-dressing of plant food.

WHEN TO SOW. Seed may be sown in hotbed in February or March, or out-of-doors from the first days of May to mid-August. It is well to sow as early as possible, thus permitting the plants to become strong and well established before winter.

WHERE TO SOW. For most perennials a cold frame is an ideal place for starting seeds, but if you do not have one, make a seed-bed of finely sifted light soil, adding and mixing thoroughly well-decayed manure, humus, or prepared plant food. Sow the seed in shallow drills, covering $\frac{1}{8}$ inch or more, according to the size of the seed, but very fine seed should only be lightly pressed into the soil.

CARE OF SEEDS AFTER SOWING. Press down the bed with a flat board, and water gently but thoroughly with a fine spray. Do not permit the soil to become dry while the seed is in process of germination, for until the plant develops roots its life depends entirely on moisture. Nearly all failures in growing perennials may be attributed to drying in the seed-bed, which should be carefully watched and watered until the plants have made four to five leaves.

Max Schling's Cutting and Bedding Flower Garden Mixture

It is our wish that we would have sufficient space to list all of the testimonials that we have received in praise of this marvelous seed value. We have received reports from all sections of the country extolling the beauty and practical results obtained from sowing this mixture. Carefully blended to strike a perfect balance between the showy bright annuals and those of more subdued tendencies,

the result provides a bold effect where required and a vista of real beauty covering large areas where it would be impossible to intensely cultivate a garden. Left to themselves, the vigorous hardy annuals in this mixture self-sow and it can be safely said that a wild garden produced from this seed will be more or less permanent.

Tips on Snapdragon Culture

Antirrhinum (Snapdragon) seed should be started in flats early in the spring. Care should be taken not to plant the seed too deeply, or to over-water. When plants are large enough to handle, they can be pricked off into 2½-inch pots and hardened in the cold frame for later transplanting.

Seeds may also be sown directly in the open soil and then thinned out, leaving seedlings about a foot apart.

Snapdragons are a hardy annual and excellent results may be obtained by fall sowing.

White Fluff. Pure white bedding and cutting variety. Pkt., 50c; 5 pkts., \$2.25.

Midget Blue. All-America Silver Medal, 1940. A dwarf Ageratum that is really dwarf. The uniform growth of these plants never exceeds 3½ inches. They are very free flowering and have no peer as an edging plant or for use in bordering Rose beds, etc. 50c per pkt., 5 pkts., \$2.25.

Blue Mink. Large powder-blue flowers on strong, 6-in. plants. Pkt., 50c; 5 pkts., \$2.25.

Ageratum, Blue Mink

SWEET ALYSSUM

In gardening the smallest investment that is made is the original cost of the material for planting. Most of the seeds, bulbs and other materials you buy are in the category of "blind" items; that is, items on which it is impossible to evaluate quality except by their performance. For this reason, and to guard against disappointments, it is wise to obtain your garden materials from a firm that specializes in that field, and from one whose reputation for quality seeds and bulbs is well known.

We of Max Schling Seedsmen, Inc., have always prided ourselves on the uniformly high quality of the seeds, bulbs and plants which we offer. The name "Max Schling" has been and will continue to be synonymous with "the best" and is your assurance of gardening success.

Because of the high cost of processing charge accounts, **please do not ask us to charge orders of less than three dollars.**

When you are in New York, come in and visit with us. Not only will you find an amazing supply of garden accessories, but also a courteous and expert staff to assist you with your horticultural problems.

CONDITIONS OF SALE

While we exercise the greatest care to send out only seeds of the very highest quality and germination, there are too many elements of Nature, or neglect on the part of the planter, not within our control, which may influence the ultimate results. It is for that reason that we can give no warranty, express or implied, as to the description, quality, productiveness or any other matter of any seeds, plants, or bulbs we sell; and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are to be returned at once.

NON-WARRANTY ON LIVE OR DORMANT PLANTS

Due to various soil and climatic conditions we, under no circumstances, will guarantee the results of any live or dormant plants. We further give no warranty as to the condition of the plants upon arrival. In the event of a destroyed shipment or any other complaint relative to plant shipments, complaints must be registered within five days after arrival. We will not accept any other complaints.

They are so prolific that proper culture requires frequent trimming of the plants so that cutting the blooms not only provides a splendid source of cut flowers, but aids the general growth of the plant as well. Petunias are impartial. They will grow anywhere, in semi-shade or in hot, dry sunny locations. The list as represented below embraces the finest selection of Petunia varieties that have been tested for their beauty, prolific bloom, and excellent growing habits.

Open a drill 2 inches deep and drop the Beans 1 inch apart and cover. When well up, draw the soil up against the plants and cultivate frequently.
